

## Landscaping

CR Minerals produces several sizes of Mine Pumice preferred by landscape architects and used by landscape contractors to enhance the look of residential and commercial properties. The consistent off-white color of CR Minerals pumice is used extensively in desert landscaping designs throughout the Southwestern United States. CR Minerals pumice is also used for color contrast with red and black volcanic rocks and other decorative aggregates and boulders.

Due to its light weight, pumice provides excellent coverage compared with other, heavier decorative aggregates. Each ton of CR Minerals pumice typically covers more than three times the area of other white and off-white decorative rocks, such as marble and limestone.
